GENERAL DESCRIPTION

For many years, NATHAN Boiler Check Valves have been used on locomotives in connection with injectors, feed-water heaters, and pumps, or wherever quick closing and tightness are of prime importance. These check valves are made in various types for application to the top or sides of locomotive boilers, as well as to stationary boilers of the locomotive type.

Check Valves for use with water heaters and pumps have a restricted lift. To eliminate pounding of the checks upon their seats due to the intermittent action of the pumps, the valves are cushioned in accordance with the recommendations of the pump manufacturers. All NATHAN Boiler Check Valves are designed with ample metal to allow refacing of checks and seats.

Boiler Check Valves for application to the top of boilers are designed with two independent systems, either of which can be cut out without affecting the other.

Most of the types are equipped with stop valves to make possible inspection, cleaning, regrinding or refacing, as well as renewal, with full pressure on the boiler. Stop valves are so constructed that in the open position, the valve spindle can be repacked under boiler pressure.

NATHAN Boiler Check Valves have full openings throughout their bodies, permitting unimpeded flow of water through them.

GENERAL SPECIFICATIONS

The policy of the NATHAN Manufacturing Company has always been to use in every item of NATHAN equipment only that material known to be best for its specific purpose.

A special grade of bronze, each heat of which is poured under strict pyrometric control in the Nathan Manufacturing Company's own foundry, provides positive assurance of the soundness of the castings used in NATHAN Boiler Check Valves. In addition, every NATHAN Boiler Check Valve is tested under an hydraulic pressure of 400 pounds per square inch before shipment.

Extensive experience, careful engineering and close production control, assure the user of NATHAN Boiler Check Valves the longest possible service with lowest maintenance cost.

Without obligation, NATHAN engineers will be pleased to consult with your engineers on any problem involving Boiler Check Valves. Long experience has enabled them to speak authoritatively on every phase of Boiler Check Valve installation and to make practical recommendations for getting the utmost in economy and efficiency from each NATHAN application.
